Foreword xvii

Preface..... xviii

Chapter 1
An Analysis Health and Psychological General Well-Being Among Convicts
Central Prison of Tamil Nadu 1
 *S. Srinivasan, Department of Humanities and Social Science, Graphic
 Era University, Deharadun, India*
 *R. Vallipriya, Department of Physical Science, Institute of Education,
 Tamil Nadu Teacher Education University, India*
 *Ajay Kumar Singh, Department of Humanities and Social Sciences,
 Graphic Era University, Dehradun, India*

Chapter 2
Bridging the Climate Gap: Leveraging Green Infrastructure and Technology
for Resilient Health Systems in Developing Nations 39
 Priya Makhija, Jain University, India
 Anita Walia, Jain University, India
 R. Thanga Kumar, Jain University, India
 A. Vyshnavi, Jain University, India
 Shankar Prasad Prasad, Jain University, India

Chapter 3
Cities Under Pressure: Addressing Urban Health Threats in the Era of
Industrialisation and Sustainable Development Goals..... 61
 Tiago Manuel Horta Reis da Silva, King's College London, UK

Chapter 4
Defining Tuberculosis Notification: Key Determinants and Associated Factors. 91
 *Suryanti Chan, Universitas Dian Nuswantoro, Indonesia & Lincoln
 University College, Malaysia*
 Idris Adewale Ahmed, Lincoln University College, Malaysia
 Hamzah Hamzah, University Batam, Indonesia

Chapter 5

Embracing Change: Understanding Climate Changes and Diversity

Challenges 125

Oindrilla Ghosh, Christ University, India

Binod Kumar, Radha Govind University, India

Chapter 6

Evaluating the Role of Industry 5.0 in Achieving Sustainable Development

Goal 3: “Good Health and Well-Being” 151

Piyush Kumar, IILM University, Gurgaon, India

Kirti Udayai, Max Healthcare, India

Ragini Sharma, JLL MENA, India

Chapter 7

Gender Inequality and Health Disparities: Addressing Social Discrimination

and Poverty in the Pursuit of Equitable Healthcare 173

Tiago Manuel Horta Reis da Silva, King's College London, UK

Chapter 8

Green Infrastructure Strategies for Ageing Populations: Enhancing Health

and Well-Being Through Sustainable Urban Design 207

Tiago Manuel Horta Reis da Silva, King's College London, UK

Chapter 9

Harnessing the Power of Digital Transformation to Promote Sustainable

Growth Enabling Companies and Societies to Build a Durable and Inclusive

Future 233

Ananya Shukla, Christ University, India

Shiv Kumar Singh Pundhir, Christ University, India

Chapter 10

Health Challenges Caused by Non-Communicable Diseases 265

Srishti Kumar, Banasthali Vidyapith, India

Vibhuti Sirohi, Banasthali Vidyapith, India

Navita Pareek, Banasthali Vidyapith, India

Chapter 11

Heavy Metals Contamination in River Water and Sediments of Ganga and

Hooghly in India 307

Abantika Ray, Jadavpur University, India

Gupinath Bhandari, Jadavpur University, India

Waliza Ansar, Behala College, India

Chapter 12

Risk Identification and Intervention Strategies in Health, Water, Food Security, and Livestock for Sustainable Development 345

N. M. A. I. Nikalansooriya, Faculty of Agriculture, University of Peradeniya, Sri Lanka

K. P. P. Kopyawattage, Faculty of Agriculture, University of Peradeniya, Sri Lanka

Chapter 13

Silent Struggles: Revealing the Mental Health Crisis Among Kattunauakan Tribal Adolescents in Kerala, South India 377

V. K. Aswathy, Lovely Professional University, India

Sanjeev Kumar, Lovely Professional University, India

Chapter 14

Solid Waste Management: E-Waste Management for Environmental Sustainability - Issues and Strategies 399

Sunil Sankathala, Ajeenkya D.Y. Patil University, India

Aditya Shrivastav, Ajeenkya D.Y. Patil University, India

Devanshi Soni, Ajeenkya D.Y. Patil University, India

Yadnyesh Khapekar, Ajeenkya D.Y. Patil University, India

Kashvi Chaturvedi, Ajeenkya D.Y. Patil University, India

Susanta Das, Ajeenkya D.Y. Patil University, India

Rakesh Kumar Jain, Ajeenkya D.Y. Patil University, India

Chapter 15

Spiritual Well-Being Index for Incarcerated Populations: An Exploratory Study 425

S. Srinivasan, Department of Humanities and Social Sciences, Graphic Era University, Dehradun, India

R. Vallipriya, Department of Physical Science, Institute of Education, Tamil Nadu Teacher Education University, India

Ajay Kumar Singh, Department of Humanities and Social Sciences, Graphic Era University, Dehradun, India

Chapter 16

Technology, Artificial Intelligence, and the Era of Information in Healthcare and Allied Sciences 461

Sudrita Roy Choudhury, Swami Vivekananda University, India

Khusboo Singh, Swami Vivekananda University, India

Samarpita Koner, Swami Vivekananda University, India

Joyeta Ghosh, Amity University, Kolkata, India

Chapter 17

The Role of Sustainable Development Goals (SDGs) in Reducing Health Inequalities	491
--	-----

Pınar N. Dalgıç, Yozgat Bozok Üniversitesi, Turkey

Chapter 18

The Unseen Stressor: How Pollution Impacts Mental Health - A Narrative Review of Literature	521
---	-----

Zainab Hamid, J&K Higher Education Department, India

Mohd Muzamil, University of Kashmir, India

Chapter 19

Toxins in the Food Chain: Understanding Bioaccumulation of Carcinogens in Marine Life and Human Health Risks	543
--	-----

Abhisikta Basu, IEM's International Institute of Juridical Sciences, India

Keya De Mukhopadhyay, University of Engineering and Management, Kolkata, India

Avishikta Chatterjee, IEM's International Institute of Juridical Sciences, India

ABSTRACT

Marine ecosystem is facing threats of pollution from heavy metals and pesticides that have the propensity to bioaccumulate and biomagnify through food chains, putting biodiversity and human health at risk. This chapter focuses on bioaccumulation and trophic transfer of heavy metals and carcinogenic effects that have their pathway in marine organisms to humans via seafood consumption. Objectives include examining the mechanisms of bioaccumulation, evaluating ecological disruptions, assessing cancer risks from prolonged exposure, and analysing the shortcomings of current legal frameworks. The chapter underscores the persistence of heavy metals in aquatic ecosystems, their toxic impacts on marine species, and the severe health risks, including cancer, linked to contaminated seafood. The study urges strong discharge controls, improved water quality standards, and integrated monitoring systems to lower heavy metal contamination, preserve biodiversity, and protect

human health from carcinogenic risks. It also calls for international cooperation, public awareness, and strong regulations.

1. INTRODUCTION

The word “bioaccumulation” is very commonly associated when discussing environmental pollution and its impact on ecosystems and human health. It describes gradual accumulation of some substances, particularly harmful chemicals in living things to quantities far higher than those found in the surrounding environment. This phenomenon has the potential to disrupt entire food chains and ecosystems, in addition to the individual organisms affected. Numerous exposure pathways may affect the process of the result such as having direct contact with polluted air, water, or soil or ingestion of contaminated food.

Bioaccumulation is commonly quantified using bioaccumulation factors (BAF), which characterize the rise of pollutants from water to biota while taking into account all exposure pathways (Proc et al, 2021). The material is considered bioaccumulation when these parameters value above predetermined criteria, commonly 5000 on a wet weight basis. The bioaccumulation process includes uptake from the environment, diffusion within the body, metabolism to possibly less or more harmful substances, storage in tissues such as bones or fat, and final elimination. The rate and amount of bioaccumulation depends on the habitat, the organism's biological characteristics, and the material's chemical composition. This phenomenon occurs when the substance's rate at which material builds up within an organism surpasses the rate at which it is broken down (metabolization) or eliminated, resulting in a progressive rise in the substance's presence within the organism. Both the properties of the material and the biological qualities of the organism have significant influence over this process. Substances that are stable, fat-soluble, and resistant to metabolic breakdown are more likely to be bioaccumulated. These materials frequently contain persistent organic contaminants and heavy metals like mercury that can enter the food chain and linger in the environment (Md. Nizam Uddin et al, 2021).

However, thinking from the organism perspective, factors such as environment, food habits, and metabolism rate are quite crucial. Organisms with slower metabolisms or those higher up the food chain are more likely to experience bioaccumulation. For instance, predatory animals have higher levels of accumulated toxins than species lower in the food chain due to a similar process called biomagnification, which raises the concentration of toxins at each trophic level.

Bioaccumulation is a major concern because of the persistence of heavy metals, hydrophobic compounds, food chain expansion, and persistent organic pollutants (POPs). People and wildlife may be exposed to persistent pollutants (POPs) includ-
